PROFESSIONAL SUMMARY

I am a data professional capable of connecting the business, its processes, and its context with the theoretical and technical skills necessary to interpret the information hidden behind the data

I worked as a cost specialist in industrial environments, a role that interacts transversally with all areas of the company, making interpersonal skills, assertive communication, and efficient articulation essential to coordinate the Cost area with other departments. I have solid experience in data handling, processing, and reporting, having collaborated with various industries: Glass industry | Metalworking industry | Renewable Energies.

I began my professional career as an auditor in an industrial company, which allowed me to go through its different areas and strengthen a systemic vision of the organization. This later proved key in my work as a cost coordinator, providing me with technical tools to interpret, design, and control data-generating procedures, ensuring data reliability.
In recent years, I expanded my training in fields related to the area: Programming, IoT, telemetry, and data engineering. I apply these skills in various data monitoring and automation projects, aimed at data capture, transmission, validation, processing, and persistence from its origin to its remote destination.

TECHNICAL SKILLS

- **Industrial Data:** Process mapping, data generation points, operational KPIs, traceability, information quality, and integration between operations, data, and IT.
- **IoT & Telemetry:** Sensors, ESP32, Raspberry Pi, MQTT, Mosquitto, Node-RED, edge devices, actuators, LoRa, and Arduino IDE.
- **SQL:** Queries, joins, subqueries, CTEs, views.
- **Databases:** PostgreSQL, relational modeling, schema design, data validation, and consistency.
- **Analytics & BI:** Advanced Excel, Tableau, exploratory analysis, dashboards, reporting, KPIs, and variance analysis.
- **Business & Systems:** ERP, costing systems, pricing, budgeting, management control, process mapping, and business-IT integration.
- **Data Engineering:** Python, PySpark, Databricks, ETL/ELT, pipelines, Bronze/Silver/Gold architecture, schemas, logging, validations, testing.
- **Infrastructure & Tools:** Linux (Ubuntu), Bash scripting, VS Code, Notebooks, Docker, Git, GitHub.

ACADEMIC BACKGROUND

- **Diplomatura en Internet of Things (IoT)** | UTN FRRe, 2024
- **Diploma in Data Science and Artificial Intelligence** | FAMAF / FCE - National University of Córdoba, 2022
- **Diploma in Renewable Energies** | Catholic University of Córdoba / Government of Córdoba, 2017
- **Ingineering in Renewable Energies** | UNILA, Brazil, 2016 | one year completed
- **Executive Postgraduate in Costing System Design and Management** | Escuela de Ejecutivos | 75% completed
- **Economic Sciences** | National University of Córdoba | Public Accountant (*)

SELECTED ADDITIONAL TRAINING

- **Artificial Intelligence Engineering | Databricks** | Indicium 2025 | open training.
- **Big Data and Spark: Data Engineering with Python and PySpark** | Udemy, 2024 | open training.
- **Apache Kafka with Python and Power BI** | Udemy, 2024
- **Micro PLC Automation** | UTN | 2024
- **Python + Databases, Advanced ETL + GitHub** | Udemy, 2022.
- **CS50: Introduction to Programming with Python** | Harvard University, 2022.
- **Multivariate Statistical Analysis** | FCE / UNC, 2022.
- **Introduction to Programming with C** | Online training, 2017.
- **Arduino** | Online training, 2016.
- **Import and Export Costs and Pricing** | CIRA, 2015.
- **Computer Systems Auditing** | FCE / UNC, 2009.
- **Tango and Manager II** | Management Software | FCE / UNC, 2008–2012.
- **Advanced Excel** | FCE / UNC, 2008.

LANGUAGES

Spanish: Native | **Portuguese:** Fluent | **English:** Intermediate - good reading; conversational skills in development

PROFESSIONAL EXPERIENCE

CIVE S.A. | Glass Industry [Industry Leader]

Management Control, Budget & Costing | Auditing

- **I began my professional career in auditing**, mapping circuits, internal controls, and processes in different areas of the company, which allowed me to develop a comprehensive vision of the organization from the start.
  I audited the generation, recording, and control processes of data for purchases, suppliers, sales, and customer accounts, using ACL as a support tool for auditing tasks. I provided active support in the implementation and adaptation of the Manager II ERP.
- **I later consolidated in Costing and Management Control Área.** It was an **industrial process** with over 100 machines involved and three lines: lamination, flat tempering, and curved tempering, intended for the automotive, railway, and architecture sectors. I worked with reporting, control dashboards, variance analysis, budgets, "make or buy" decisions, process mapping, plant mapping, and time and motion studies, optimizing costs.

Key achievement

- **I redesigned the cost structure of a production line** after its technological update and implemented an activity-based costing (ABC) system.

LAMBERT HERMANOS S.A. | Metalworking Industry [4th in its sector]

Cost Coordination Manager

- **I coordinated, designed, and implemented the factory's master costing system** *(Activity-Based Costing).*
- **I acted as a liaison between Systems, operations, and management**, translating business needs into information models for costing, budgeting, and control, which were then validated and integrated into the ERP. Extracting, structuring, reconciling, and validating information to build indicators, break-even points, analyze variances, prepare budgets and operating forecasts *(Budget/Forecast)*, optimize costs, and operational decisions *(Make/Buy)*.
- **I mapped production processes and information flows**, including time and motion studies, to identify critical activities, bottlenecks, and define reliable data collection and processing mechanisms.

Key achievements

- I redesigned **cost allocation** criteria, correcting distortions of up to 40% in the apportionment between products. This improvement in the costing system allowed the company to have more accurate information to prepare and quote its commercial tenders.
- Applying **cost optimization**, I detected an unutilized tariff benefit on imported inputs that explained a large part of material expenses, generating a positive economic and financial impact for the company. (Pareto Analysis, Customs Legislation Audit, Foreign Trade Procedures Management, Operational Implementation).

CASTOLDI & ASOCIADOS | Consulting

Cost and IT Management Consulting

- I provide **IT management solutions** to local accounting firm clients, focusing on costs, management control, and IT technology implementation, mapping processes, business rules, and data pipelines to improve operations and business decision-making.

Featured project | E-60 Industrial Costing System

- **I developed a comprehensive costing model for an E-60 wind turbine production line for a small industrial workshop**. The model allows determining unit costs, contribution margin, break-even point, and production budgets. In a first stage, the costing engine was fully implemented in Excel.
- I developed a **second version** of the system as a cost management solution in **Python**, with a **PostgreSQL** relational database and an interactive **Streamlit** interface. I implemented versioned costing and recosting, operation traceability, access controls, and backup and recovery procedures. *(Version 1.0: validated and in production).*

FEATURED PROJECTS · go to portfolio

- **E-60 | Industrial costing system:** design and implementation of a costing system for an industrial production line. Evolved into a traceable software solution to calculate unit costs, contribution margins, and break-even points, prepare operating budgets, and support management control.
- **TelemetriaGreenhouse | IoT and data:** evolution of a greenhouse monitoring and control system using IoT devices, towards data modeling and processing with Python and PySpark.
- **Web Scraping | Vehicle Market Scraper:** extraction of vehicle listings through a modular software architecture, avoiding individual access to each listing.
- **Automation / Scripting:** recursive file search in the system, metadata extraction, and automatic generation of structured Excel reports.
- **Analytical Dashboard | Tableau Public:** Interactive dashboard with KPIs, temporal evolution, and exploration filters. View dashboard

PERSONAL PROJECTS

Personal projects that allowed me to develop and apply skills in sensors, IoT, telemetry, device communication, and automation, aligned with Industry 4.0 environments.

- **Automated solar tracker:** LDR sensors, stepper motors, and Arduino Uno for tracking the sun's position.
- **Automated irrigation system:** soil moisture sensor, solenoid valve, relay module, and Arduino Uno.
- **Automatic pet door:** PIR sensor, electromechanical limit switches, DC motor, and Arduino Nano.
- **Kids Emergency communication device:** MQTT communication and long-range LoRa network design.
